

DRES2Market Dissemination and Communication Activities at the Energy School, Warsaw School of Economics

The DRES2Market partners IEN and ENEA presented DRES2Market project during the stationary and online workshop, organised by the Warsaw School of Economics, on 21.04.2022. This workshop was a part of the Energy School, developed at the Warsaw School of Economics.

We presented and discussed the following topics:

- DRES2Market projects objectives, targets and goals,
- Barriers for large integration of PV and onshore wind energy in distribution network,
- The impact of RES large penetration for grid congestions,
- The impact of self - consumption and storage on grid congestions.

We also provided and distributed DRES2Market brochures and leaflets.

Aim of the School of Energy is to disseminate results of scientific research in the field of energy and climate economics, as well as to create opportunities for constructive discussion on current and future way of functioning of energy markets. This discussion takes a form of regular lectures by representatives of the science and business, who familiarize the audience with various aspects of functioning of energy markets and topics of climate change in the economic context.
