

The 8th World Conference on Photovoltaic Energy Conversion

One of activities of the DES2Market project as a part of WP 5 – Communication and Dissemination was participation in the 8th World Conference on Photovoltaic Energy Conversion - 8-WCPEC, which took place on 26 – 30 September, 2022 at the Milano Convention Centre in Milan, Italy.

The 8th World Conference on Photovoltaic Energy Conversion was the world's largest scientific event and specialised PV Conference on development of photovoltaics worldwide. It was also the world's largest PV research and development platform, a venue for discussing the evolution of photovoltaics and offering a unique opportunity for international exchange.

The WCPEC - 8 brought together speakers and participants from three of the largest and most important international PV conferences: the European PV Solar Energy Conference (EU PVSEC), the Photovoltaic Specialists Conference (IEEE PVSC) and the International PV Science and Engineering Conference (PVSEC). The event was attended by over 1,500 participants from 60 countries.

The DRES2Market project poster was placed in the Visual Poster Presentation at stand no.: 5DV.2.40. The poster and leaflets of the project were presented to the Conference delegates throughout the Conference week in the poster zone, which was fully integrated with the Conference area.

Information on the project's objectives, achievements, progress and outputs were widely disseminated to the main target groups attending the conference and fair. The DRES2Market project brochures and leaflets were also presented in the European Union project area.

The project poster booth attracted significant interest and proved to be a suitable place to exchange and communicate information about the project.

The outline of the project, as well as work carried out and results achieved regarding the DRES2Market project were presented, and the Conference delegates had opportunity to ask questions, lead discussions and participate in the information exchange.

We also had the opportunity to hold many meetings and discussions with conference participants, representatives of companies and organizations in order to present and promote the project results and spread knowledge among exhibitors and visitors, including: research and development institutes, energy consultants, as well as publishing media, producers, suppliers, distributors and service providers of photovoltaics.
